Cable Retention

The KonnektIT offers cable retention through its unique entry gates.

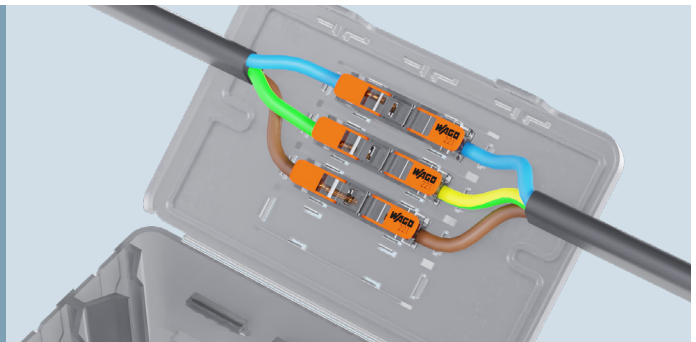

These entry gates provide pressure to the cable ensuring a tight grip and superior retention for maximum protection.

WAGO Inline Connectors

The KonnektIT has been designed to work with WAGO's new inline lever connectors.

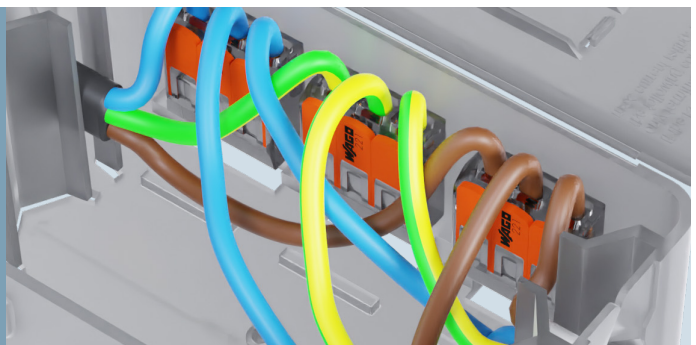

The connectors simply click into place on the inside of the lid offering a clean professional finish to your installation.

WAGO 221 Connectors

As well as the new WAGO Inline connectors, the KonnektIT can also house WAGO 221's series in 2, 3 or 5 way options.

The connectors simply click into the inner side walls and offer a secure, tidy and professional finish.

Easy Closing Lid

The easy closing lid is quick and simple to use ensuring your connections stay well protected.

A tool or screwdriver should be used when opening.
